

Asusgo API docs

1)Users:

*The login is with google cloud platform, it takes three steps

-First:get the url for login

Get: “-url-/api/login”

Return: json {“url”:google_url} / json{“msj”:error}

-Second:insert into url and login , auto redirect and save in server

Return: redirect“-url/-extension-?id” / json{“msj”:error}

-Third:get the user info with id

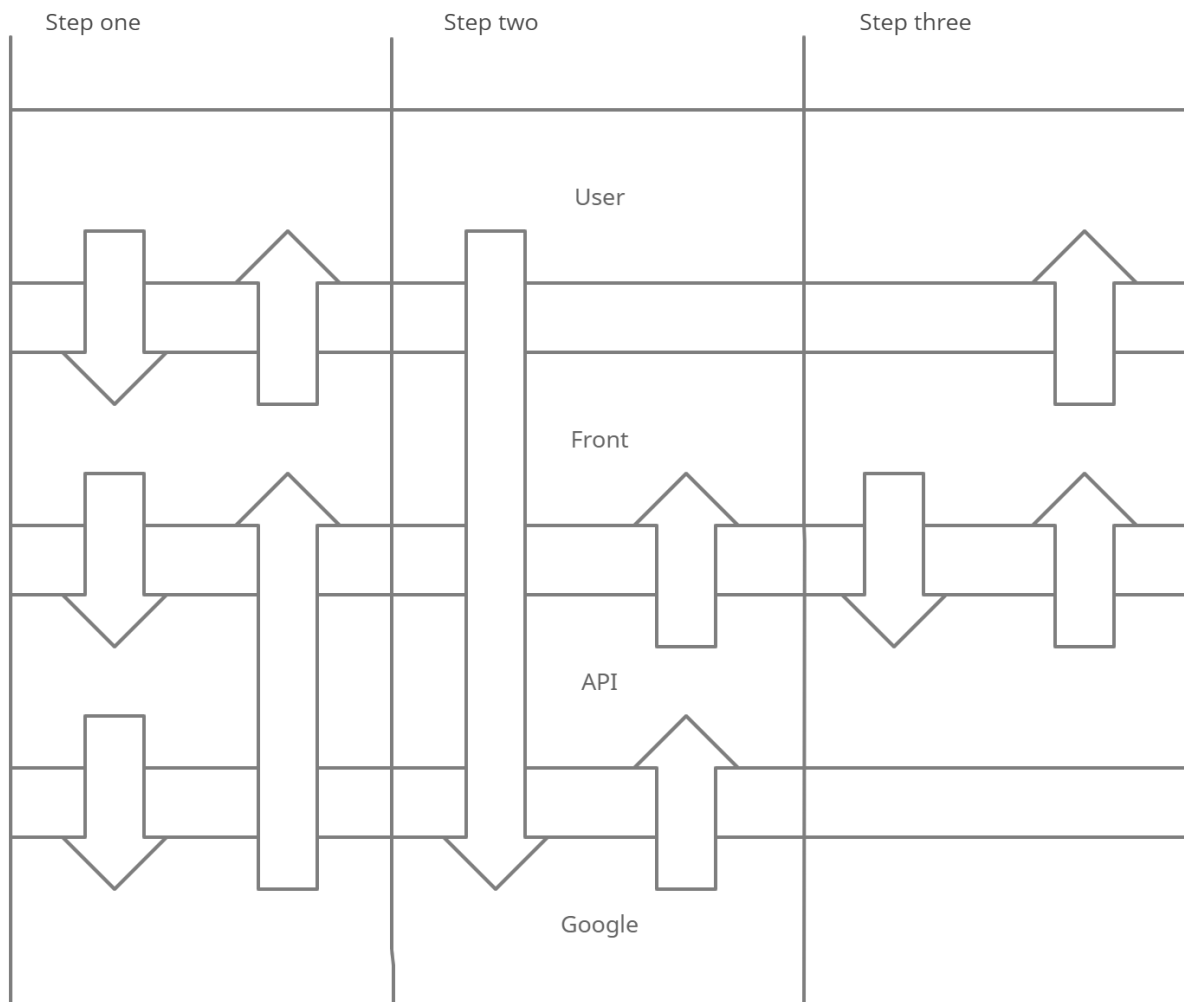

Get: “-url-/api/getuser” json{“id”:id}

Return: json{“user”:array} / json{“msj”:error}

*important:

-Requirements:

Internet connection and have emails from liceopaz school

2)Message:

*The messages have three routes , for add, read and delete

-Read:get the messages with the type

Get: "-url-/api/message/read" json{"type":bool}
